

Thermographic and Electro/Ex Supervision

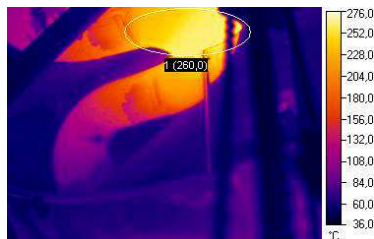

Thermographic is a picture of heat, being an excellent tool for conditional based maintenance. Allows detecting overheated components before any damage is done, preventing unpleasant shut down and expensive repair costs through planned advance repairs. Benefits:

- The survey can be done while the equipment is in use.
- The survey performed quickly and with safe distance to the equipment.

Reasons for choosing Thermographic survey:

- Detect faults before break down
- Increasing the operational stability and decrease risk of fire
- Unforeseen shutdowns will be greatly reduced

We check and document the engine room; - any oil or fuel leakage with in danger of getting in contact with exhaust or other objects having a surface temperature over 220 `C, may cause fire.

Electro and Ex Supervision

Axess is an authorized Electro Installations Company Gr. L

Axess performs supervision and installation of electrical installations and electrical equipment in enterprises, ships and mobile offshore installations.
